PROFESSIONAL SUMMARY

Senior Software Engineer (QA) with 4.1+ years of full-time experience in Automation Testing, Manual Testing, Functional Testing, Regression Testing, API Testing, SQL Validation, and Telecom Billing Domain. Skilled in Selenium WebDriver, Java, TestNG, Maven, Agile methodologies, and GenAI Testing. Possess 4.7+ years of overall IT experience, including completion of HCLTech's Entry Level IT Training Program (Oct 2021 – Apr 2022). Experienced in delivering high-quality releases for Verizon's Telecom Billing and Payments applications through functional, regression, automation, and backend validation testing.

EXPERIENCE

Senior Software Engineer — QA Automation

Apr 2022 - Present

HCLTech | Client: Verizon | Telecom Billing & Payments Domain

- * Worked as a QA Engineer in the Verizon Telecom Billing domain, responsible for end-to-end Regression Testing and Release Validation for monthly and Agile releases. Designed, executed, and maintained regression test suites covering Billing, Payments, Usage, Loans, and Customer Account Management modules.
- * Performed Functional, Integration, Smoke, Sanity, and Regression Testing to validate application stability after code changes and enhancements.
- * Developed and maintained Selenium WebDriver automation scripts in Java - improved regression coverage by 40% and reduced manual effort by 30%.
- * Maintained Automation Framework using Selenium, TestNG, Maven, and Git for stable, reusable test execution.
- * Participated in Agile ceremonies, release validation, production verification, and defect triage activities, ensuring successful deployment of business-critical telecom applications.
- * Maintained daily interactions with customers, providing timely test status updates and build reports - strengthened client relationships and improved account trust between HCLTech and Verizon stakeholders.

HCL Entry Level IT Training Program

Oct 2021 - Apr 2022

HCLTech

- * Successfully completed HCLTech Entry Level IT Training Program; trained in Software Testing, SDLC, STLC, Defect Lifecycle, SQL, and Java fundamentals.
- * Learned Automation Testing concepts using Selenium WebDriver and TestNG through hands-on project simulations and QA exercises.

TECHNICAL SKILLS

Manual Testing:	Functional, Regression, Smoke, Sanity, Integration, UAT Testing, STLC, SDLC, Defect Lifecycle
Automation:	Selenium WebDriver, Java, TestNG, Maven, Page Object Model, WebDriver Manager, Framework Maintenance, Cucumber BDD
Tools:	JIRA, QTest, Git, GitHub, GitHub Copilot, Gemini AI, Claude, Postman, Notebook LM, Selenium
Database:	SQL, Backend Data Validation, Defect Tracking
Domain:	Telecom Billing, Payments, Progression Testing, Loans Domain, Agile / Scrum
GenAI Testing:	Prompt Validation, Hallucination Detection, Context Retention Testing, Bias Testing, Safety Testing, Chatbot Testing, Prompt Injection Testing

PROJECTS

Project 01 - Telecom Billing Application Testing

Client: Verizon | Role: QA Engineer

- * Responsible for end-to-end Regression Testing and Release Validation for monthly and Agile releases across Billing, Payments, Usage, Loans, and Customer Account Management modules.
- * Performed Functional, Integration, Smoke, Sanity, and Regression Testing to validate application stability after code changes.
- * Executed SQL queries for backend data validation and used JIRA/QTest for defect tracking and test management.
- * Collaborated with developers, business analysts, and stakeholders to ensure high-quality releases and timely defect resolution.

Project 02 - CPR (Progression Testing)

Client: Verizon | Role: QA Engineer

CPR (Code Process Request) validates Verizon's Ordering and Billing systems — orders placed generate a Crusted and Order ID in the Vision (Oracle) DB, billing is processed, and the invoice is delivered to the customer.

- * Involved in Test Execution, Test Design, and Dump preparation for CPRs allocated for monthly ER and Agile releases.
- * Prepared and shared daily status reports with client managers for release tracking; participated in defect triage meetings with stakeholders.

Project 03 - CPI (Common Pricing Interface)

Client: Verizon | Role: QA Automation Engineer (Selenium)

Environment: Selenium WebDriver, Java, XPath, Firefox, Chrome

CPI is used to create and manage plans, features, and service products based on customer requirements, location, or business situation, maintained in the billing system for front-end use.

- * Automated CPI web application using TestNG Framework with Selenium WebDriver; developed reusable and generic test scripts.
- * Verified automated test results, logged defects in JIRA, provided estimates for automation planning, and participated in Scrum ceremonies.

Project 04 - GenAI Testing Project

Role: QA Engineer / AI Tester

- * Tested 50+ prompt scenarios covering edge cases, adversarial inputs, and multi-turn conversations; reduced hallucination rate by 20% through systematic response evaluation.
- * Conducted bias, safety, chatbot, and prompt injection testing on LLM outputs, using GitHub Copilot, Gemini AI, and Claude for AI-assisted testing workflows.
